HYPERKITTY
UPDATING MAILMAN'S UI

PRESENTED BY

Máirín Duffy
Principal Interaction Designer,
Red Hat, Inc.

Who am I?

QUICK STATS:

Operating System	Fedora 20
Desktop Environment	GNOME 3
Occupation	Principal Interaction Designer @ Red Hat Fedora Design Team Lead
Last used OS X, Windows, or any Adobe stuff	Early 2006
How the heck do you pronounce your name?	Just call me "Mo." :)

What am I talking about?
(and why should you care?)

- Are you subscribed to any mailing lists?

- Do you want to interact with a project that uses mailing lists?

- Are you drowning in email?

- Do you hate flamewars and trolls?

History
(selective)

GNU Mailman

Started in 1997/1998

Mailman 1.0 released July 30, 1999

Mailman 2.0 released November 22, 2000

Mailman 3.0 Alpha 1 released March 26, 2009

Mailman 3.0 Beta 1 / Postorious 1.0 Alpha 1 released March 26, 2009

LATEST STABLE   Mailman 3.0 Beta 3 released December 31, 2012

lists.fedoraproject.org Mailing Lists

Welcome!

Below is a listing of all the public mailing lists on lists.fedoraproject.org. Click on a list name to get more information about the list, or to subscribe, unsubscribe, and change the preferences on your subscription. To visit the general information page for an unadvertised list, open a URL similar to this one, but with a '/' and the list name appended.

List administrators, you can visit the list admin overview page to find the management interface for your list.

If you are having trouble using the lists, please contact mailman@lists.fedoraproject.org.

List	Description
389-announce	Announcements for the 389 Directory server project
389-commits	List of git/CVS commits to the 389 Directory server project
389-devel	389 Directory server developer discussion.
389-users	General discussion list for the 389 Directory server project.
Ada	Fedora Ada SIG
advisory-board	Fedora community advisory board
ambassadors	*[no description available]*
ambassadors-it	*[no description available]*
announce	Announcements related to the Fedora Project
ANZ	Fedora Australia & New Zealand
argentina	Fedora Argentina
arm	Discussions about the Fedora ARM Project
arm-builds	*[no description available]*
astronomy	*[no description available]*
badges	Discussion of the Open Badges Infrastructure
bangladesh-users	Fedora Bangladesh Discussion List
bigdata	Fedora Big Data SIG
board-private	Fedora Board discussion of sensitive issues
br-users	Lista de discuss�o voltada para os usu�rios brasileiros do Fedora
brasil-marketing	Lista dos embaixadores brasileiros do Projeto Fedora
buildsys	Discussion of Fedora build system
Campus-ambassadors	*[no description available]*
Chinese	Fedora Chinese

About devel

This list is only for discussion of development issues in the Fedora Project.

THIS IS NOT A SUPPORT LIST. THIS LIST IS FOR DEVELOPMENT DISCUSSION ONLY.

Users seeking support should see the [Fedora Wiki](#) for various methods of getting (and giving) help.

Please follow the Fedora Code of conduct: http://fedoraproject.org/code-of-conduct

To see the collection of prior postings to the list, visit the [devel Archives](#).

Using devel

To post a message to all the list members, send email to [devel@lists.fedoraproject.org](#).

You can subscribe to the list, or change your existing subscription, in the sections below.

Subscribing to devel

Subscribe to devel by filling out the following form. You will be sent email requesting confirmation, to prevent others from gratuitously subscribing you. This is a hidden list, which means that the list of members is available only to the list administrator.

Your email address:	
Your name (optional):	

A password will be automatically generated for you, and it will be sent to you once you've confirmed your subscription. You can always request a mail-back of your password when you edit your personal options.

Once a month, your password will be emailed to you as a reminder.

Which language do you prefer to display your messages?	English
Would you like to receive list mail batched in a daily digest?	● No ○ Yes

[Subscribe]

devel Subscribers

(*The subscribers list is only available to the list administrator.*)

Enter your admin address and password to visit the subscribers list:

Admin address: [_____] Password: [_____] [Visit Subscriber List]

To unsubscribe from devel, get a password reminder, or change your subscription options enter your subscription email address:

[_____] [Unsubscribe or edit options]

If you leave the field blank, you will be prompted for your email address

[Test-Announce] 2014-03-03 @ 16:00 UTC - Fedora QA Meeting

Adam Williamson awilliam at redhat.com
Sat Mar 1 00:06:14 UTC 2014

```
# Fedora Quality Assurance Meeting
# Date: 2014-03-03
# Time: 16:00 UTC
(https://fedoraproject.org/wiki/Infrastructure/UTCHowto)
# Location: #fedora-meeting on irc.freenode.net

Greetings testers!

It's meeting time again on Monday! The .next Working Groups are expected
to have their technical specifications in good order by the time of our
meeting, so we can probably take a look at those. We'd also like to
check in on Taskotron progress, and look at some ideas that have come up
about the update validation process.

== Proposed Agenda Topics ==
1. Previous meeting follow-up
   * adamw to draft up a proposal to the Anaconda devs about guided
     partitioning screen
   * cmurf to fill in blanks on the proposal
2. Fedora.next plans
   * desktop technical spec: https://fedoraproject.org/wiki/Workstation/Technical_Specification
   * server spec: https://fedoraproject.org/wiki/Server/Technical_Specification
   * Partitioning plans?
   * Expected deliverable load?
3. Taskotron check-in
4. Update policy
   * Bad updates: see
     https://admin.fedoraproject.org/updates/FEDORA-2014-2922/libreoffice-4.2.1.1-1.fc20 ,
     https://admin.fedoraproject.org/updates/FEDORA-2014-3092/dnf-0.4.15-1.fc20 ,
     https://lists.fedoraproject.org/pipermail/devel/2014-February/196072.html
   * Stronger enforcement of existing AutoQA tests? But: false negatives
5. Open floor

More information about the devel mailing list

#1 1997 called; it wants its design back.

#2 No ability to search.

#3 Clunky navigation; less affordances than mail clients.

#4 Intimidating interface for would-be new contributors.

#5 Difficult to get clear overview.

#1   Missed opportunity to improve list interaction dynamics.

#2   Barriers to access high-value content / knowledge / history.

#3   All lists per server treated equally.

#4   Trolls and other scary creatures.

#5   Missed opportunity to enable remote collaboration.

☆ **What is the "official" way to download scratch builds from Koji?** *Yesterday*

QUESTION   David Malcolm

I recently discovered this script for downloading scratch builds from Koji:
http://people.redhat.com/mikeb/scripts/download-scratch.py

Is this the "official" way of doing this? If so, is this packaged somewhere? (e.g. in a more recent build of "koji" or "rpmdevtools"). I keep losing the URL, and never have this script to hand.

(I'd also really like a "rpmlint-scratch TASK_ID" command, packaged somewhere, as I do this regularly during the developer side of a package review)

TAG CLOUD

Fedora FESCo RPM Build Updates Koji Package

March 2010 http://ur1.ca/gvmwy

2 years pass. Then...

A new hope!

#1 Original blog post continued to get a massive number of hits and continued to be widely referenced.

#2 Opportunity at Red Hat to commit developer time towards implementation.

#3 Great timing with PyCon 2012 and upstream Mailman project interest.

#1 Promoting Good Posts

The idea here is that someone's made a brilliant post to a mailing list (it happens!) and you'd like to promote it to a more visible format: maybe press a button and it'll bring you to a page with a form pre-filled with the message content so you can edit it down into a wiki page. Or maybe it could promote it to a blog post or something (you might have to hook up a wordpress blog or something to the system.) Or maybe it would add a special tag that would make it appear off to the side in a special 'articles' section, which is the best of the best mailing list posts? Maybe users would get prompted to promote a post after it's reached a particular high quality threshold (in the thumbnail, it has 5 stars.)

#2 Embedded keyword highlights
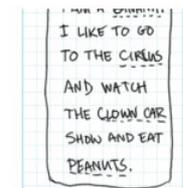

It might be cool to, within a message, have different keywords that appear regularly on-list be highlighted. Sort of like how you can read a book on the Amazon Kindle, there's a feature where it will highlight passages in the book that many other people have highlighted, so you can scan the page and get a feel for the perceived 'weight' or 'importance' of the various chunks of text you're reading on the page. Maybe you could hover over a term and get an idea of how popular it is on the list. Or....

#3 Keyword Summary

For every keyword mentioned on a list (maybe to be a keyword, a term would need more than 10 mentions in a given month) there could be a page to highlight the keyword's use over time and give a summary of threads/discussions where it played a role. This page could also suggest similar keywords you might want to check out, or even other lists on the same server where that keyword is discussed and people who talk about it a lot.
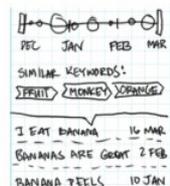

#4 High School Yearbook (For your list)
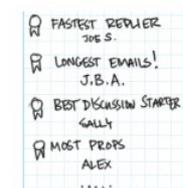

If your high school yearbook was like mine, you probably had a section towards the back with 'titles' like "Most likely to succeed," "Best Smile," "Funniest Person," etc. Well, maybe something like this would be fun for a mailing list. People who tend to start conversations that spark good discussion could get recognized. People who tend to send long messages, people who get the most kudos – this is the kind of aggregate data that we can only get a vague sense of when we follow a list, but that we could compute and make visible easily so folks just joining a list can get a feel for the list climate and who is who without having to lurk for weeks.

#5 Mail Message Pingbacks

I don't know if you use WordPress, but I do. One feature that is pretty cool about WordPress is that, depending on how things are hooked up, if another blog mentions one of your blog posts, or if someone tweets about it on Twitter, etc., you'll get a "pingback" comment to the post which is basically a link reference to the discussion about your post on the external site. It might be cool to have a way to track these 'pingbacks' to particular mailing list threads or posts as well. E.g., if a thread gets published to LWN.net, that might be good to track right in the archives for that thread.

#6 User profiles

The last thing any of us want to do is fill out yet another profile, am I right? Yet, we also want to get an idea of "who is this person?" sometimes when we read a post by someone we don't know. Maybe it's an opportunity to make a new friend with similar interests, or simply a way to gauge the authority of a person asserting a thing on a list to see if you trust it. We should have enough data about a person's habits on list to present a picture of their on-list personality. While we need to be careful about not being creepy (like say Google) here, it might be cool to know the types of things someone likes to talk about based on the keywords in their posts, what time of day they tend to be around, the languages they speak (if they are a non-native speaker of the list language, for example, this is good to know because it could color your interpretation differently)... a timeline of their posts to see how long they have been around. That kind of thing.

#7 Family tree thread

Here, well, I'm not sure if this is useful or not, but I was thinking the way threads can break off sometimes might represent a family tree. It might be a useful visualization to explore for viewing a thread.

#8 Welcome Gift

One of my personal goals for creating a nice web interface for mailing lists is to make it easier for users new to the list or the greater community to ramp up and start participating. While some lists a very good about welcoming new users, I thought maybe more lists would welcome new users if there was a contextual prompt to do so. So, if a user is new, maybe a little 'new' flag could appear next to their name in posts for a few weeks. And, if someone is new, the old timer users while logged in could be prompted to send a 'welcome gift' to them. If we have a badge system, maybe it's a badge. Maybe it's just simply a private, off-list friendly note. Not sure. But some kind of positive reinforcement for the new person's participation to help them feel welcome and rewarded for venturing in I thought might be cool.

#9 Read via Thread Timeline

For a given thread, maybe the first post in the thread, being the 'conversation starter,' is shown up top, then directly below you have a timeline that shows via bubbles on the axis when the conversation in reply to the initial post happened. You can, with the left and right arrows, jump forward through the replies via the time they were posted (rather than their threading) and the timeline will highlight where the currently-open post is in time so you can understand when it was posted in relation to the other posts. This view of course prioritizes the timing of posts over their logical relationship to content of other posts.
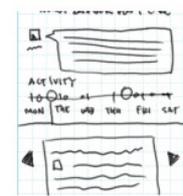

#10 Top 10 Threads of All-Time

Since mailing lists do tend to be a bit cluttered and there does tend to be an unfavorable signal to noise ratio at times. This is an idea to make the best of the m[...] across month after mo[...] people up-voted a thre[...]

Summer of Code 2012

GNU Mailman: Improving archives by extending HyperKitty

Aamir Khan

ABSTRACT

My project will focus on implementing new features in HyperKitty archiver.

Organization Homepage ››

ADDITIONAL INFORMATION

Mailman is in need for replacement of its default pipermail archiver. It is over 10 years old and users' expectations have changed and their requirements are more sophisticated than the current archiver can deliver on. Mailman3 is the currently under active development and it offers a pluggable architecture where multiple archivers can be plugged to the core without too much pain.

HyperKitty is Mailman3 archiver, aimed to address issues listed at ModernArchiving. It is under development by fedora project people. The UI mockups for HyperKitty looks very ambitious. There are several ideas posted by Máirín on her blog at ideas 1 to 16 and ideas 17 to 32.

CODE SAMPLES

File name	Size	Date submitted
Aamir_Khan.tar.gz	545.0 KB	August 31 2012 21:13 UTC

Student Aamir Khan (syst3mw0rm,) mentored by Pierre-Yves Chibon

- Login authentication

- Initial reputation system

- Basic user profiles

- Template refactoring / bootstrap

- Discussion threading

- Thread tagging

- Thread rating mechanism

- Initial unit tests

Summer 2012, https://github.com/syst3mw0rm/hyperkitty/

Aurélien Bompard Joins!

Aurélien Bompard joins Red Hat and begins working on HyperKitty full-time in August 2012.

- First alpha release November 23, 2012

- Moved to Github January 2013 (http://github.com/hyperkitty)

- He continues to crank out *tons* of new features and improvements; details at aurelien.bompard.org and in github
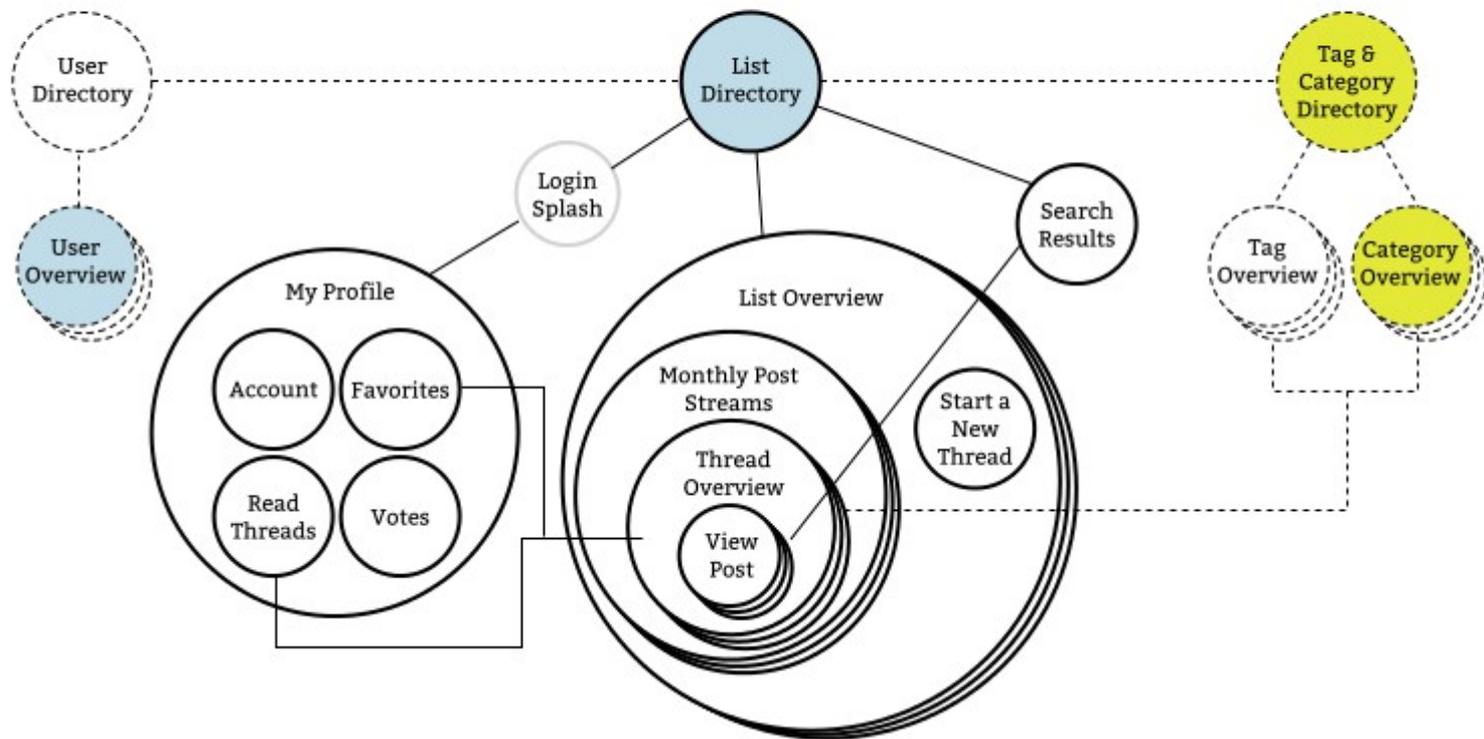

August 2012, http://ur1.ca/gvnef

On the UX front…

Máirín Duffy, Summer 2013+

- List overview redesign

- Design for user profiles

- Design iterations on UI chrome

- Post category design

Hyperkitty Site Map Future Ideas

July 2013, http://ur1.ca/gvnc5

List administrators, you can visit the list admin overview page to find the management interface for your list.

If you are having trouble using the lists, please contact mailman@lists.fedoraproject.org.

CATEGORIES OF LISTS

announce   commits
region   community
team   users
project   event
tickets   year

List	Description
389-announce	Announcements for the 389 Directory server project
389-commits	List of git/CVS commits to the 389 Directory server project
389-devel	389 Directory server developer discussion.
389-users	General discussion list for the 389 Directory server project.

could these be grouped together? clearly they're related.

Ada	Fedora Ada SIG *is this group still active? i haven't heard of it before.*
advisory-board	Fedora community advisory board
ambassadors	[no description available]
ambassadors-it	[no description available]

why does only Italy have its own list?

announce	Announcements related to the Fedora Project

this seems pretty major, maybe should be called out specially?

ANZ	Fedora Australia & New Zealand
arm	Discussions about the Fedora ARM Project
arm-builds	[no description available]
astronomy	[no description available]

Are there other regional lists? Should they be grouped together? GEOIP to suggest potential relevant ones?

The two ARM lists should be grouped together.

badges	Discussion of the Open Badges Infrastructure

Should development projects be grouped together?

bangladesh-users	Fedora Bangladesh Discussion List
bigdata	Fedora Big Data SIG
board-private	Fedora Board discussion of sensitive issues

If it's private it could be called out differently.

br-devel	Lista de Discuss�o voltada para os Desenvolvedores Brasileiros do Fedora
br-edu	[no description available]
br-users	Lista de discuss�o voltada para os usu�rios brasileiros do Fedora
brasil-marketing	Lista dos embaixadores brasileiros do Projeto Fedora

Why does Brazil have its own devel list? Another candidate for grouping.

buildsys	Discussion of Fedora build system
Campus-ambassadors	[no description available]
Chinese	Fedora Chinese

Is this discussion in Chinese, of Chinese (translations), or the Chinese community?

classroom	Fedora IRC Classroom discussion and feedback list
cloud	Fedora Cloud SIG
cwg	[no description available]
cwg-private	Community Working Group
de-users	Fedora discussions in German
design-team	Fedora Design Team
design-team-tickets	[no description available]

tickets lists could be called out differently (most in fedorahosted though no?)

desktop	Discussions about development for the Fedora desktop
devel	Development discussions related to Fedora
devel-announce	Announcements for Fedora Developers

announce lists are another category of list type.

doc-fol	[no description available]

what is this?

docs	For participants of the Documentation Project
docs-commits	For tracking commits to Docs Project owned modules
docs-qa	Fedora Docs QA list

*why do docs have their own qa list?*

Women's Outreach Program 2014

Karen Tang (ktnode), mentored by Máirín Duffy

- Bootstrap upgrade to 3.0

- Massive CSS cleanups

- Addition of LESS to django setup

- Responsive & mobile-friendly layouts

- List overview statistics redesign

- Better personalization in design

- New page stubs: category list, category overview, find user, user public profile

- Icon fixes (upgrade to font icons)

Dec 2013 - Mar 2014, http://uxscrutiny.com/category/opw/hyperkitty/
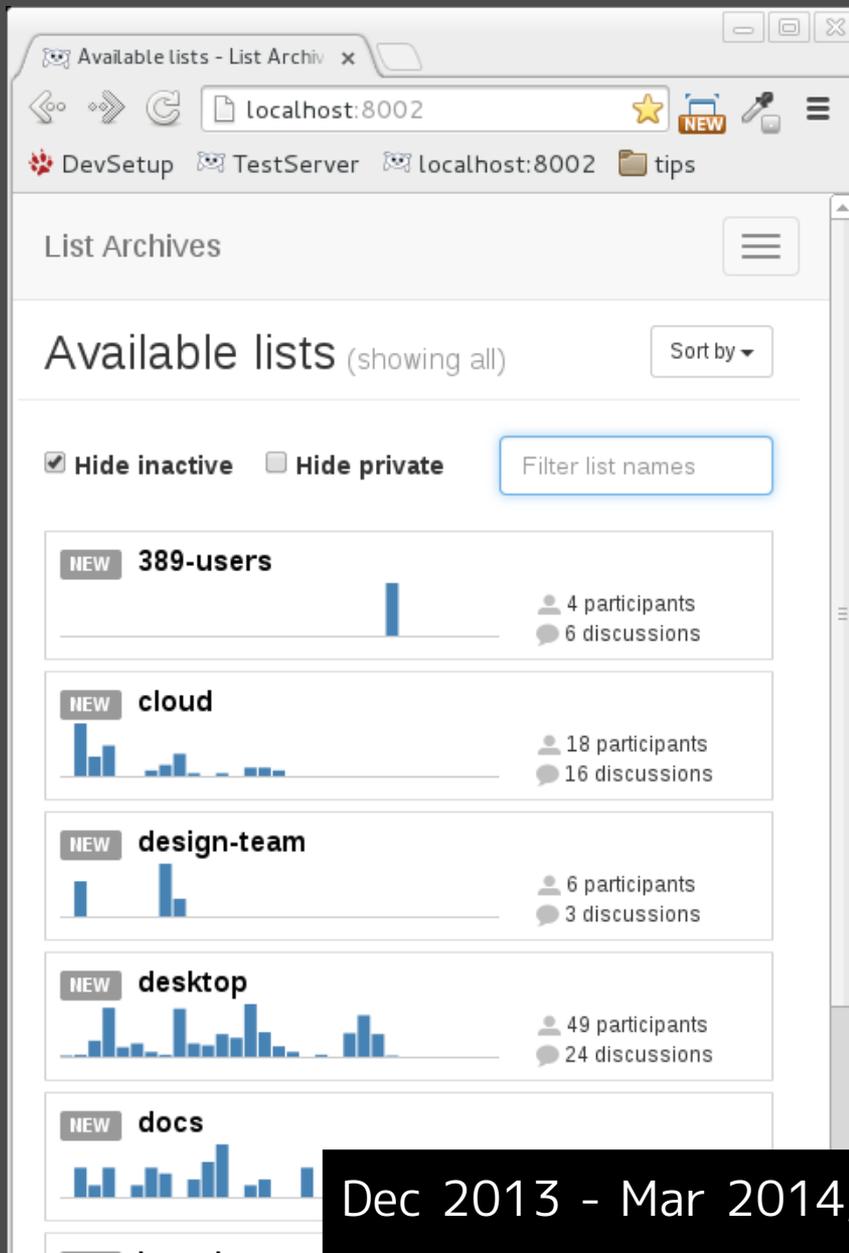

Frequently-Asked Questions

#1 Do you expect me to use a lame web UI, like a forum user or something? Ick.

#2 What about GroupServer?

#3 What about Discourse?

#4 When will it
        be released?

Demo time!

Follow along at:
https://lists.stg.fedoraproject.org/archives/

#1 Test out our demo server!
